

Phoscrete 2020 Liquid Activator Technical Bulletin

To our valued customers, reps and distributors:

Effective immediately, Phoscrete is shipping Liquid Activator produced by a new supplier. We performed extensive lab and field testing on the new liquid phosphate to confirm equal performance. The product is chemically identical to the old activator, but the color is clearer and the ratio of liquid to dry is different.

It is important that new jugs mix only with new bags and old with old.

The new jugs are distinguished by a green bar on the label. Only Dry Mix bags with a lot number beginning with "0" (for 2020) or a green bar or sticker on the bag should be mixed with the green bar jugs.

Dry mix bags with lot numbers beginning with "9" were produced in 2019, etc.

Shelf life for our bags remains at 2 years, and jugs still have a shelf life of 1 year. So long as your older product is within the shelf life, there is no concern about installing it.

To avoid confusion of new and old bags and jugs, we encourage you to install all the older material first (and as soon as possible).

All products produced by Phoscrete starting in 2020 will use the new activator. This includes Phoscrete HC (Horizontal/Castable), Phoscrete VO (Vertical/Overhead), and Phoscrete SG (Shotcrete/Gunite).

If you have any questions regarding materials you have on-hand or materials you may need, please contact me or your Phoscrete representative.

Best,
Jeff Schonis, Quality Control Manager
